Python-Movie-EDA

“Exploratory data analysis on movie dataset using Python to analyze trends in budget, revenue, and release patterns.”

Python Movie EDA

Overview

This project performs exploratory data analysis on a movie dataset to identify trends in budget, revenue, and movie releases.

Tools Used

- Python
- Pandas
- Matplotlib

Analysis Performed

- Data cleaning (removed null values and duplicates)
- Analyzed relationship between budget and revenue
- Studied movie release trends over years

Key Insights

- Higher budget movies tend to generate higher revenue
- Movie releases have increased over time
- Some high-budget movies result in low returns
